

# Robert Smith

## Senior Systems Architect II

### PERSONAL STATEMENT

Information technology professional with extensive experience in cloud, systems and network architecture, project management, and data center design and management. Areas of specialty include building teams, overall system architecture, architectural infrastructure, network design, business analysis, data center management, and distributed information systems.

### WORK EXPERIENCE

#### **Senior Systems Architect II** **ABC Corporation - 2003 - 2010**

##### *Responsibilities:*

- Worked as part of a project team to ensure that the business and technical architecture of the delivered solution matches customer requirements.
- Provided thought-leadership to fellow team members and the client across business and technical project dimensions solving complex business requirements.
- Ensured delivered solutions meet/performance to technical and functional requirements.
- Provided technical expertise and ownership in the diagnosis and resolution of an issue, including the determination and provision of workaround solution or escalation to GCS and/or Product engineering.
- Identified project technical risks.
- Ensured delivered solutions are realized in time frame committed.
- Recommended the design for a web-based application to be used at the Army's largest rotary-wing depot maintenance operation.

#### **Senior Systems Architect** **Delta Corporation - 2005 - 2013**

##### *Responsibilities:*

- This includes scope definition, requirements analysis, functional and technical design, application build, product configuration, unit testing, UAT and production deployment.
- Developed the LOHCOST database system that is now being used within the z/Architecture CEC to provide caching.
- Developed Live Guest Relocation algorithms and support for z/Linux KVM.
- Designed and developed the z/VM Extended Address Volume, Parallel Access Volume, Hyper Parallel Access Volume, FlashCopy/SE support and the QDIO Thin .
- This code is used to perform Initial Program Load and System Dump functions during critical system failures without relying on complex multi-threaded .
- Hired to re-architect the complete end-to-end solution Apple uses to collect test data in every factory for every device manufactured.
- Managed requirements gathering, POCs with multiple vendors and performance measurement.
