PROFESSIONAL EXPERIENCE

Hardware / Software Consultant
ABC Corporation - July 1996 – March 1998

Key Deliverables:
- Responsible for the development of system and detailed level requirements for a PC based Traffic Signal Control application using MFC Visual C++.
- Developed systems and detailed requirements, the delivery schedule for the User I/F phase (GUI), testing procedures, test scripts, and training.
- Actual development and deployment had to be concurrent with operations utilizing the existing mainframe.
- Developed handheld interfaces (GUI) for PocketPC using Windows CE for field technicians to interface with the system.
- Developed GIS I/F for the user of the traffic signal control application to allow visual status (GUI) of traffic conditions and current problems.
- Developed requirements and design for use of a GPS tracking system for emergency vehicles to allow traffic flow to be optimized in advance along the travel route of an emergency response vehicle.
- Coach and mentor more junior developers. Succeed at all tasks, typically with zero stories reopens.

Software Consultant
ABC Corporation - 1995 – 1996

Key Deliverables:
- Solve problems, solve challenging problems, and solve challenging problems that no one else can
- Learn and evaluate the full breadth of available Microsoft and complementary technologies

- Leading customer discussions recommending technologies and approaches for the benefit of our clients
- Develop custom software.
