WORK EXPERIENCE

Junior Software Engineer
Dough, Inc. / Tastytrade.com -   August 2015 – April 2017

Responsibilities:

- For the first few months of being an official junior software engineer, i continued work on the redesign while adding a number of features and site improvements.
- Replace elasticsearch with google site search, forcing a revamp of our semantic metadata improving our search and our overall SEO value.
- Built tooling for our CDN transition and update current management applications to the new APIs.
- Around November 2015, dough, inc. Began gearing up to build a new startup and began the task of creating tastyworks - a full-blown, independent brokerage! While much of the early discovery work and first-round engineering decisions were made by the seniors, I was lucky enough to get to listen and ask questions about a process I was seeing for the first time.
- Understanding software design patterns when building micro-services architecture.
- Building APIs using the grapeapi framework (prior to rails 5 API mode).
- Building XenServer infrastructure using terraform, chef, docker, PowerShell.

Apprentice Ruby-on-Rails Developer
Dough, Inc. / Tastytrade -   June 2015 – August 2015

Responsibilities:

- Primarily working on the tastytrade.com website, which focuses on video content delivery. Worked through a major site redesign focusing on responsive web design compliant for both web and mobile-web. It turned out quite pretty!.
- Foundation, sass, html5/css3, and learning proper smacss principles.
- Raw javascript, ajax, and jquery were used as we had no front-end framework.
- In addition to tastytrade redesign work, I went through doughs apprenticeship cycle, which includes pairing with senior developers, various engineering, and development challenges.
- Taking part in tech talks, participating in team retrospective meetings, and meeting with business stakeholders to hammer out design/functionality priorities for the site.
